

Call us and let us show you the benefits of Alpha Banking!

Alpha Banking builds on the operational excellence that has always been the hallmark of the Highgate family of products. It is flexible, scalable, and makes use of the latest technologies to deliver a powerful and cost-effective solution that supports your strategies and gives you the flexibility you need to help build your business.

Platform Independence – You choose the hardware you want to run it on. There is not requirement for special servers.

Data Base Independence – Choose a database that is congruent with your existing technology investment.

Integrated General Ledger – Alpha Banking has an integrated General Ledger or you can interface to the General Ledger of your choice.

Alpha Banking can support the delivery channels you need. Easy to implement. Easy to learn. Call us and we'll show you why Alpha Banking is ideal for your organization.

Our customers have told us what they need, and Highgate has delivered.

Alpha Banking is both 'evolutionary' and 'revolutionary'. It builds on the capabilities of the current Highgate Banking system using Highgate's knowledge of customer requirements and the needs they have expressed to us. At the same time, it makes use of modern technology to deliver a flexible, customer-configurable system that Highgate's clients can use to build their businesses.

Alpha Banking was demonstrated at the recent Highgate Client Conference in Toronto and attendees there were universally excited by the potential of this new system.

Alpha Banking delivers, in ways that make sense for your organization. You can use technologies your staff are familiar with or choose a 'best of breed' technology that exactly meets your strategic needs.

- Any Hardware
- Any Operating System
- Any Database

Features include:

Platform independence – there is no longer a requirement for a specific family of servers to run Alpha Banking. Clients can choose the technology platform they wish to run on. From a large server to a laptop – Alpha Banking will run on them all. The technology platform has now become a choice driven by transaction volumes, business needs, and staff expertise.

A browser-based interface – users need only have access to one of the popular browsers to use Alpha Banking. There is no requirement for any software to be installed on user machines.

Operating System Independence – clients may select an operating system that best meets their needs. Windows or Linux? It doesn't matter – pick what works for your organization.

Database independence – choose the database you wish to use.

Ready integration to 'best of breed' solutions – when clients require something special to meet their business needs,

Alpha Banking can be integrated to a third party solution to incorporate that functionality into the Alpha environment.

Of course, Alpha Banking can support the delivery channels you need, as well as new products like the Alert Management Server, Highgate Collections and International Debit Cards.

With the first customer 'live' and the second in implementation, Alpha Banking is ready to move forward in the marketplace. Of course, the needs of each Highgate client are unique, and we will work with each user to configure the system to meet their specific requirements.

Alpha Banking

It's new. It's real. It's here. Call us today.
